SUMMARY

Computer Science graduate (2026) who works across the AI/ML stack — training deep learning models in PyTorch and TensorFlow, evaluating LLM outputs, writing prompts, and building the data pipelines that feed all of it. Shipped a paid automation system for an international client and currently evaluate LLM responses at Handshake AI. Looking for an early-career AI/ML role where I can get real models into real products.

EXPERIENCE

AI / LLM Specialist (Contract) — Handshake AI

Nov 2025 – Present

Remote

- Evaluate LLM outputs against detailed technical rubrics across coding and reasoning domains, rating response quality and surfacing recurring failure patterns.
- Author reference solutions that improve model reasoning on coding tasks, turning observed failure modes into structured feedback for training pipelines.

Freelance AI Automation Developer — Upwork

Jun 2026 - Aug 2026

Remote

- Delivered a full-stack Python automation system for an international client (first paid freelance contract) — including a Streamlit dashboard, deployment package, README, and video handover — that automated a significant share of the client's previously manual weekly workflow.
- Engineered a data ingestion pipeline (Google Drive API, Service Account auth) syncing CSV, JSON, and Google Sheets sources into the application in real time.
- Built a Gmail IMAP/SMTP integration to automatically read and respond to incoming notification emails, removing the need for manual monitoring and handling.
- Developed an FAQ-matching engine using keyword scoring and sequence-similarity algorithms — production-ready with no external ML dependency — automatically resolving user queries without requiring escalation.

AI / ML PROJECTS

Smart Waste Management System

Aug 2025

Deep Learning, CNN, Transfer Learning (VGG16 / ResNet)

- Built an automated waste-classification pipeline using transfer learning on pre-trained VGG16/ResNet CNNs, with a custom augmentation and normalization pipeline to improve generalization, and fine-tuned convolutional layers for real-time inference.

Facial Emotion Detection System

Jul 2024

TensorFlow, Keras, OpenCV, CNN, FER-2013 Dataset

- Developed a deep-learning facial emotion-recognition model with a custom preprocessing/augmentation pipeline, evaluated using precision, recall, and F1-score.

Movie Recommendation System

Oct 2024

Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Built a personalized recommendation engine using K-Nearest Neighbors collaborative filtering (72% prediction accuracy) over user–item interaction data, with an efficient similarity-measurement pipeline.

HACKATHONS & COMPETITIONS

Amazon HackOn Season 6 — Participant

Jun 2026

- Selected for a national-level hackathon on scalable backend and cloud systems; designed a low-latency architecture with efficient API routing and intent classification.

TECHNICAL SKILLS

AI & Machine Learning: PyTorch, TensorFlow, Keras, Scikit-learn, CNNs, Transfer Learning (VGG16/ResNet), Computer Vision (OpenCV), NLP, Recommendation Systems, Model Evaluation (precision/recall/F1)

LLM & Generative AI: Prompt engineering, LLM output evaluation, LangChain, retrieval & similarity-based matching

Data & Pipelines: Pandas, NumPy, ETL-style workflows, REST APIs, Google Drive API, Gmail IMAP/SMTP, data preprocessing & cleaning

Languages & Databases: Python, Java, C/C++, Kotlin, SQL, MySQL, relational database design

Tools: Git/GitHub, Streamlit, VS Code, Google Colab, Android Studio

EDUCATION & CERTIFICATIONS

Lovely Professional University Punjab, India

Bachelors of Technology, Computer Science & Engineering: CGPA: 7.5

2022 – 2026

Certifications:

Introduction to TensorFlow for AI, ML & Deep Learning (Coursera)

Generative AI & Prompt Engineering & Getting Started with Git and GitHub (Coursera)

Python, Data Science & Machine Learning (Cipher Schools)

Cloud Computing (NPTEL)
