SUMMARY

Computer Science graduate (2026) with hands-on experience building Python data pipelines, API-based data ingestion, and machine learning systems. Skilled in ETL-style workflows, data preprocessing, and integrating structured data sources (CSV, JSON, Google Sheets). Strong foundation in Python, Java, and SQL. Seeking an early-career data engineering role building scalable data processing and analytics systems.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, Kotlin, SQL

Data & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, NLP, LangChain

Data Engineering & Pipelines: ETL-style workflows, data ingestion (CSV / JSON / Google Sheets), REST APIs, Google Drive API, data preprocessing & cleaning

Databases: MySQL, relational database design

Tools & Platforms: Git/GitHub, VS Code, Google Colab, Android Studio, Eclipse

Core Concepts: Data Structures & Algorithms, OOP, Database Design, System Design (learning)

EXPERIENCE

Freelance AI Automation Developer — Upwork

Jun 2026

Remote | Contract

- Delivered a full-stack Python automation system for an international client (first paid freelance contract), including a Streamlit dashboard and complete deployment package.
- Engineered a data ingestion pipeline (Google Drive API with Service Account auth) syncing CSV, JSON, and Google Sheets data into the application.
- Built a Gmail IMAP/SMTP integration to automatically read and respond to incoming notification emails, reducing manual handling.
- Developed a FAQ matching engine using keyword scoring and sequence-similarity algorithms — production-ready with no external ML dependency.
- Shipped source code, README, environment configuration, and a video walkthrough for client handover.

PROJECTS

Smart Waste Management System

Aug 2025

Deep Learning, CNN, Transfer Learning (VGG16 / ResNet)

- Built an automated waste-classification system using pre-trained VGG16/ResNet CNNs with transfer learning.
- Designed a preprocessing pipeline (augmentation, normalization) to improve generalization on a large image dataset.
- Fine-tuned convolutional layers for high accuracy and integrated the model into a real-time inference pipeline.

Movie Recommendation System

Oct 2024

Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Built a personalized recommendation engine using K-Nearest Neighbours collaborative filtering, achieving 72% prediction accuracy.
- Implemented an efficient similarity-measurement data pipeline over user-item interaction data.

Facial Emotion Detection System

Jul 2024

TensorFlow, Keras, OpenCV, CNN, FER-2013 Dataset

- Developed a deep-learning facial emotion-recognition model evaluated with precision, recall, and F1-score.
- Built a preprocessing and augmentation pipeline to improve model generalization.

HACKATHONS & COMPETITIONS

Amazon HackOn Season 6 — Participant

2025

- Selected for a national-level hackathon focused on scalable backend systems and cloud-based solutions; designed a low-latency architecture with efficient API routing and intent classification.

EDUCATION

Lovely Professional University — B.Tech, Computer Science & Engineering

2022 – 2026

Phagwara, Punjab

CERTIFICATIONS

- TensorFlow for AI, ML & Deep Learning — Coursera (Apr 2025) | Generative AI & Prompt Engineering — Coursera (Mar 2024)
- Python, Data Science & ML — Cipher Schools (Jul 2024) | Cloud Computing — NPTEL (Nov 2024)
